

## On-Disc Print Declaration

IMS has print specifications that are to be followed in order to obtain high quality silkscreen printing results.

- Minimum type size for positive printing is 6 point type.
- Minimum type size for reverse out printing is 6 point type.
- Minimum stroke width and rule or line width is .5 points. Anything smaller will not reproduce accurately
- Screen or dot percentage range is 15%-90%. Meaning any screens less than 15% will not show. And any that are greater than 90% will fill in. Designs not following these dot percentages will result in less than desired print results.

Any variations in these specifications may result in less than desirable results.

In order for IMS to produce product, you must agree to one of the following terms:

- We wish IMS to print the provided digital file as is and we understand that there will be variation between digital proofs/color laser prints and the final product. PDF files are acceptable as proofs and we understand that colors may vary.
- We wish IMS to provide a one-off print sample for our product. We accept the charge of \$150 to create this print sample. This approved one-off print sample will be used as IMS's color guide upon customer approval.
- We wish IMS to match previously produced art with our provided file. We accept a charge of \$350 for time and materials to match our provided print materials. This approved print sample will be used as IMS's color guide upon customer approval.
